

Tools

The Tools dropdown menu contains access to the modules for palette editing, data preparation, creation of maps from class data, generation of time step maps from ASCII (American Standard Code for Information Interchange) CSV (comma-separated values) files, generation of slope and aspect maps from digital elevation models, interpolation of vector data, AVI file creation, point monitoring, and several other useful utilities. AVI files (Audio Video Interleaved) are a Windows[®] multimedia video format from Microsoft[®].

These modules may also be accessed via other routes from buttons on the menu bar.
